✉️ stefanschutte@icloud.com

I am an entry-level Software Developer looking for a position where I can learn on the job. I completed a Software Development course at CodeSpace Academy. I have also completed many courses on Udemy and plan to continue expanding my knowledge through learning and practical application. My studies have prepared me to be able to learn rapidly and I am committed to learning new technologies and languages.

I am currently working as a Software Developer at Meshed360, where I'm expanding my skills in a real-world development environment. This experience has strengthened my understanding of development practices and allowed me to build my knowledge of C#, ASP.NET, and MS SQL in practical settings. I am eager to continue growing and to contribute meaningfully to any project or team.

I am ready for a challenge and eager to prove myself. I am seeking experience in the software development industry and believe that I would be an asset to any business because I am willing to go above and beyond.
